

SENG 265- LAB 4

szehtabi@uvic.ca

Functions to read file

- `FILE* fopen(char* filename, char* mode)`
 - mode: r, w, a, r+, w+, a+
- `char* fgets(char* str, int size, FILE* file)`
- `char *strtok(char *str, const char *delims)`
 - including `string.h`
 - delims: a list of characters
 - str: the string to be tokenized
- more useful functions: `strcmp`, `strcpy`, `strlen`,...

Exercise

- Download the file the-hobbit.in
- Print how many words there are in the file
- Count the number of times the word hobbit appears
